

Belgravia Traffic Review

As the number of people living in Edmonton grows, the City strives to adapt Edmonton's mobility system to move people around as efficiently and effectively as possible. There has been an increase in concerns in the Belgravia neighbourhood about traffic congestion and queuing along certain roadways, as well as shortcutting through the neighbourhood, especially during peak rush hour times. This project was initiated as a result of a Council motion made on April 8, 2025 ([see item 10.2](#)), which directed the City to complete a traffic assessment study of the Belgravia neighbourhood and identify potential short- and long-term interventions to optimize the road network and reduce shortcutting.

Public Engagement Opportunities

The following public engagement opportunities are available for residents to provide feedback on their experience with traffic flow and congestion challenges in Belgravia:

- Engaged Edmonton website (November 24 to December 21, 2025)
- Online Q&A session (December 10, 7:00 p.m.)
- Plus the option to sign up for a walking tour or Chat with a Planner session.

Visit engaged.edmonton.ca/BelgraviaTrafficReview to learn more and participate.

How Feedback Be Used & Next Steps

The City will be collecting feedback on the community's experience with neighbourhood traffic flow and congestion challenges in the Belgravia area. This input, along with technical and policy considerations, will be used to help assess potential short- and long-term neighbourhood traffic and shortcutting improvement measures which will be brought to the Urban Planning Committee for information. Further Committee direction and funding would be required to implement any future improvement measures.
