# Sharing Space:

# One street. Many needs.

> *Curbside space is a valuable public asset that serves many needs beyond parking.*

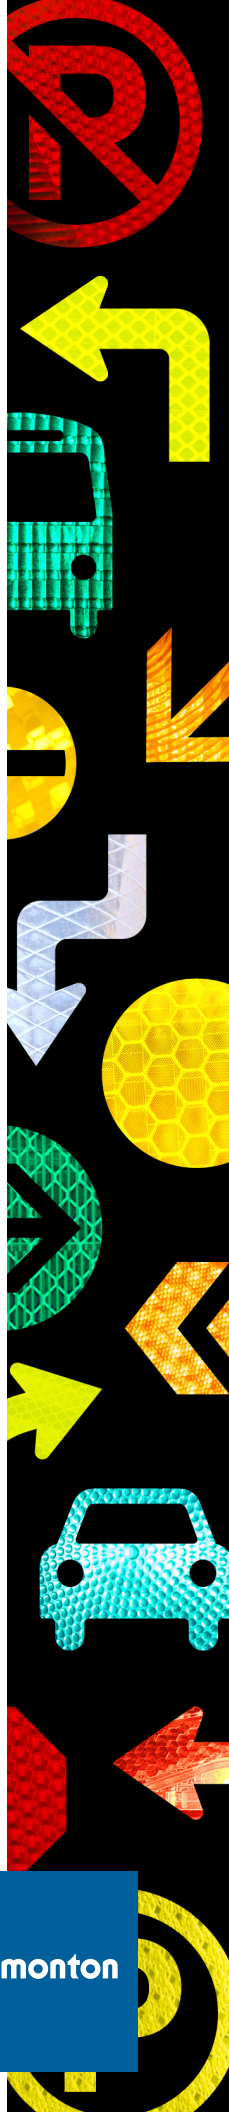

## What should the future of residential parking look like?

Parking is a balancing act of availability, affordability, access for different users, convenience and the overall user experience. Curbside space also needs to support the activities that make our city and neighbourhoods vibrant and connected. That includes deliveries, passenger pick-up and drop-off, active transportation, transit access and business activities.

As Edmonton grows to a city of two million people, curbside space has become an increasingly limited and valuable public asset. The City is modernizing its approach to curbside and parking programming, including the Residential Parking Program (RPP). The choices being considered will involve both benefits and trade-offs and may affect how parking is managed in residential areas.

## How should limited curbside space be managed as these needs evolve?

Understanding community values, priorities, expectations and the trade-offs people consider reasonable will help shape the future approach.

# Meeting Residential Parking Needs:

## A Balancing Act

The following image shows key priorities for how the City of Edmonton makes decisions about residential parking.

Under each priority are several choices that need to be made, with different trade-offs and impacts on everyone who uses residential curbside spaces.
