

Speed Humps in Ramsay Heights - Next Steps

April 2022

In May 2021, the City installed temporary speed humps to address community concerns around speeding and poor driver behaviour along Whitemud Road, Ramsay Road and Ramsay Crescent. The speed humps were left in over the winter months to see how they performed under snow and ice conditions.

Unfortunately, blading to bare pavement left most of the speed humps damaged by snow plowing equipment, and they will be completely removed within the next few weeks as a result. Moving forward, the City is exploring replacing the temporary speed humps with permanent asphalt humps.

Get Involved!

The City invites Ramsay Heights community members to provide input to understand the level of support for the permanent asphalt humps, including location confirmation. To participate in this feedback opportunity, please visit engaged.edmonton.ca/ramsay to:

- Complete an online survey between April 28-May 16
- Register for a virtual meeting on May 3 (6-7pm) or May 5 (9-10am)
- Add a pin to our online map by May 16 to help us confirm locations

Timeline

If there is community support to proceed with permanent speed humps, installation will occur this summer.
