# What is a Neighbourhood Structure Plan (NSP)?

The purpose of the Snowberry Neighbourhood Structure Plan (NSP) is to provide a document to establish a land use framework and provide detailed objectives, planning policies and requirements of applicable statutory plans.

The NSP is intended to outline the:

- vision of the neighbourhood;
- type and location of land uses;
- residential densities and forecasted population;
- location of major roads and utilities (water, storm and sanitary sewers);
- location of future park and school sites;
- retention of natural areas; and
- general staging pattern for development.

The next slide shows where the NSP falls within the planning and development process.

# Planning & Development Process

- **Strategic Plans** outline high level goals and objectives to guide physical, economic, social growth and development of the entire city (ex. The City Plan)
- **Planning Policy and Guidelines** provide detailed direction about how specific strategic goals and objectives will be achieved (ex. Winter Design Guidelines)
- May apply to all or specific areas of the city.

- High level outline of how an area / group of neighbourhoods will develop.
- Locate major facilities, arterial roads and land uses by general category.

- Detail size, configuration, location of future land use and densities, roads, municipal services, and staging for a neighbourhood.
- Policies guide planning and design of buildings, streets, parks, community facilities, transit service and other infrastructure as the neighbourhood develops.

- **Zoning** establishes development rights for a parcel or area of land, including permitted land uses, building heights, forms densities, site layout, landscape and parking. Zoning must be consistent with the Municipal Development Plan policies.
- **Subdivision** divides land into smaller parcels, guided by zoning, NSP policies and City engineering standards. It also sets the pattern of development by determining location, shape of lots and roads.

- **Servicing Agreements** identify municipal improvements (sewers, water, roads, etc.) to be built by the developer and responsibilities for them once complete.

# Who's involved in the NSP process?

GROUP	ROLE
General Public	Provide comments on the NSP if interested
Landowners	Stay informed on the NSP process as it will affect future development opportunities on their property
Participating Landowners	Contribute financially to the technical studies and work closely with consultants to prepare the NSP
Consultant / Applicant	Prepare the NSP on behalf of participating landowners and work with City Staff to revise and improve the NSP as necessary
Reviewing Agencies	Review the NSP and associated technical reports carefully to ensure the plan will result in a complete community with housing and services for residents, efficient infrastructure, and a sustainable open space network
City Council	Hear comments from the public and landowners, evaluate the final NSP, and vote on whether to Adopt the NSP

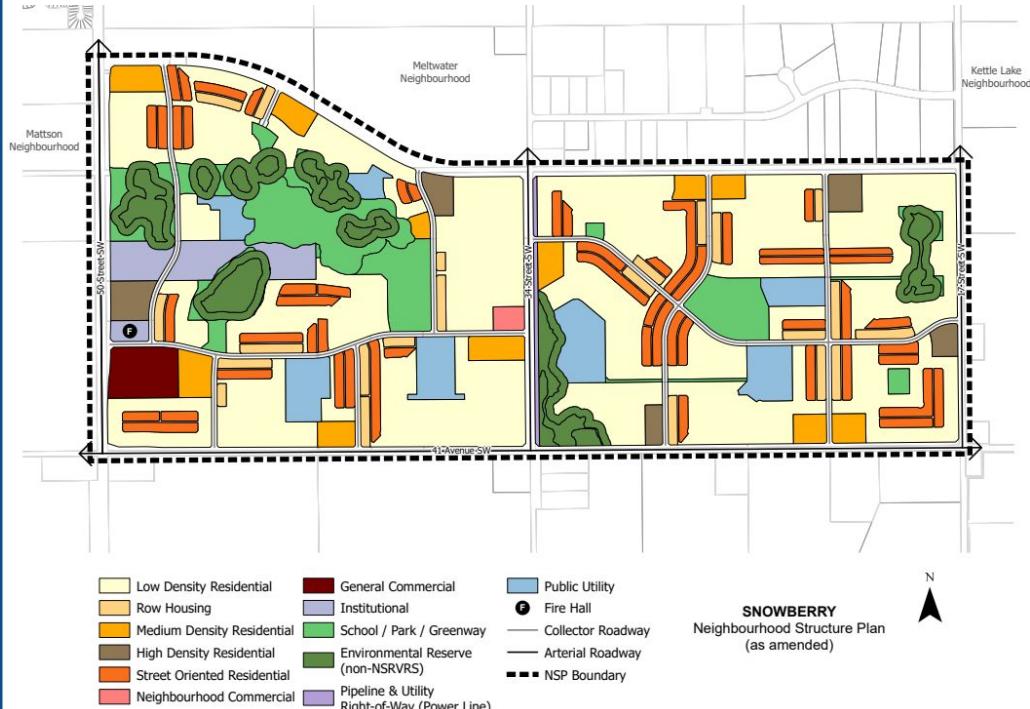

# What Plans does City Council Consider?

There are a variety of Council-approved plans that are taken into consideration when reviewing a new NSP such as The City Plan, Edmonton's Municipal Development Plan, the recently approved District Plans, and applicable Area Structure Plans.

Other strategies and guidelines are also considered, such as Breathe, Edmonton's Green Network Strategy.

# Application: The Adoption of a Proposed New NSP

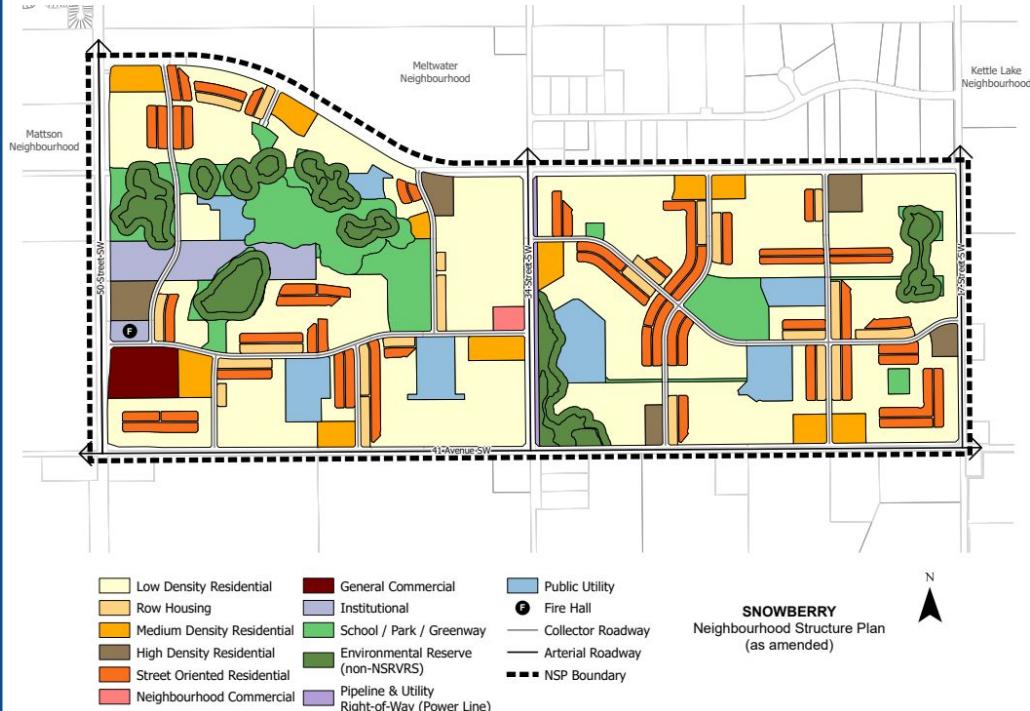

The proposed Snowberry NSP is generally located between 50 Street SW to the west, 28 Avenue SW to the north, 17 Street SW to the east and 41 Avenue SW to the south.

The proposed NSP has been prepared in accordance with the City's updated Terms of Reference for Preparing NSPs in Urban Growth Areas.

Five residential land use designations are proposed in the NSP, ranging from low density to high density residential that will allow for a variety of housing types including single detached, semi-detached, row housing and multi-unit housing.

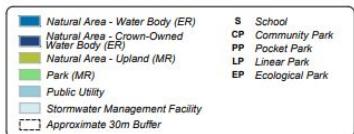

The overall proposed planned density for the neighbourhood is expected to be 45 dwelling units per net residential hectare.

# Application: The Adoption of a Proposed New NSP

The NSP also proposes pockets of commercial uses, including a focus of general commercial uses in the southwest portion of the neighbourhood, adjacent to 50 Street SW.

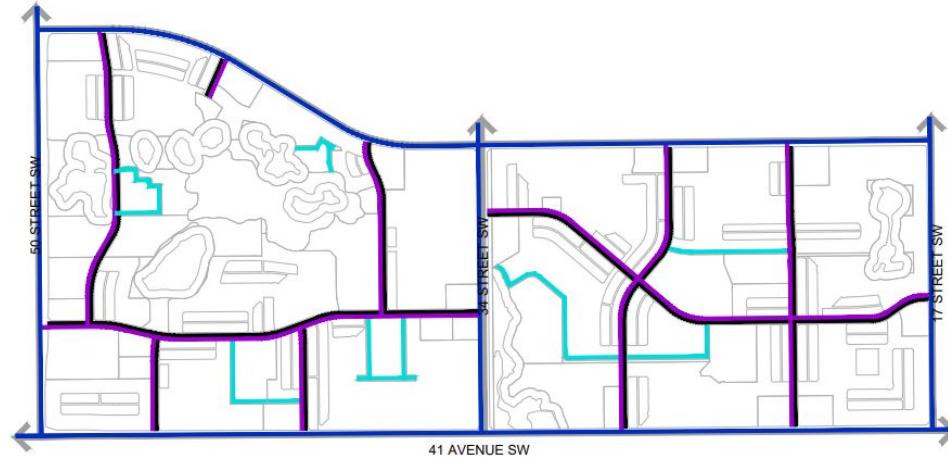

# Application: The Adoption of a Proposed New NSP

Open space and natural area uses are located throughout the neighbourhood, with a strong concentration in the western portion of the neighbourhood.

School sites are proposed in both the west and east portions of the neighbourhoods, providing balanced opportunities for access. Additionally stormwater management facilities will be carefully dispersed throughout the neighbourhood to accommodate stormwater runoff.

# Application: The Adoption of a Proposed New NSP

A hierarchy of arterial, collector and local roadways will facilitate the efficient movement of vehicle traffic. This will be complemented by a continuous network of sidewalks and shared pathways to accommodate active users and provide connectivity to various land uses and destinations.

# What Happens Next

# What Happens Next

As shown on the previous slide, there are a lot of steps involved in the application before a decision can be made. The City of Edmonton is undertaking a technical review of the application while concurrently seeking feedback from the public on the application. The following includes what happens next:

- The City will collect and summarize the information gathered from your feedback in a *What We Heard Report*. This report will be forwarded to the Applicant where they may choose to make changes to the proposed plan. It will also be included in the report that goes to City Council when this file advances to Public Hearing.
- As part of the review, the proposed plan is evaluated against City Plans, Policies and technical reports.
- When the application is ready to advance to Council Public Hearing, surrounding landowners and community leagues will be notified of the date and time.
- City Council will review the final proposed plan and decide whether to adopt it.
- If the proposal is adopted, landowners can apply for rezonings and subdivisions.

For more detailed information on this application, please see the proposed NSP and ASP report available through this website.

# How to get involved!

Questions can be directed to the City or the Applicant. A response will be provided by the appropriate group.

Please submit questions and feedback to the City through the Engaged Edmonton [website](#) from February 9, 2026 until February 22, 2026.

To submit questions or feedback to the applicant, please contact Yolanda Lew with Stantec Consulting Ltd. at [yolanda.lew@stantec.com](mailto:yolanda.lew@stantec.com) or 780-969-2190.

**Please note:** Feedback received by the City will be summarized and made available on this website as well as be included in a report to City Council so that they are aware of your perspectives prior to making a decision on this application.

# Thank you!

Edmonton
