

City Policy and Strategy Guidance for Draft Design

Wîhkwêntôwin ᐃᐧᐦᑫᐧᓵᐧᑐᐃᐧᐣ Neighbourhood Renewal

1. **The City Plan** — Combined Municipal Development Plan and Transportation Master Plan that sets the strategic direction for the way Edmonton grows, including direction on its mobility systems, open spaces, and employment and social networks. Neighbourhood renewal helps to implement the plan by improving the public realm and active transportation network, enhancing the urban forest, and by seeking equity in project decision making through taking a GBA+ lens.

2. **Complete Streets Policy & Complete Streets Design and Construction Standards** – integrate best practices in design guidance to support the planning, design, and construction of streets in Edmonton that are safe, attractive, comfortable and welcoming to all users in all seasons. Recent update to Policy and Standards (2025) addresses winter design, Climate resilience, accessibility, traffic safety and low impact development.

3. **District Policy and Central District Plan** – Contains district-specific maps and area-specific policies to show how the city-wide District Policy directions are applied in each district. Shows where different types of development are appropriate and what public infrastructure is planned in all parts of each district. Identifies nodes and corridors, district bike routes, pedestrian priority areas, greenways, and development influences on the public realm.

4. **Accessibility for People with Disabilities Policy & Access Design Guide** — Provides direction on planning, designing, and building facilities, open spaces and transportation systems that follow universal design principles and are equitable to people of all ages and abilities.

5. **The Bike Plan** — Supports the City Plan's vision of a connected and accessible city by providing design guidance for Edmonton's bike network. This includes guidance on missing links, the overall network and facility types.

6. **Safe Mobility Strategy** — Edmonton's new approach to achieve Vision Zero through safe and livable streets. Neighbourhood Renewal helps to identify traffic safety issues through public engagement and safe mobility data and develop designs to mitigate traffic safety issues.

7. **Curbside Priorities Framework** – Process to prioritise curbside space for different functions more equitably and strategically to the benefit of all Edmontonians. It identifies target percentages for different curbside functions based on the block's typology. Neighbourhood Renewal applies this process to identify where to prioritize on street parking.

8. **Winter Design Policy & Winter Design Guidelines** — Provides ideas and standards that improve our streetscapes in the context of Edmonton's winter climate and conditions for a more accessible, safe, aesthetically pleasing and enjoyable year round experience.

9. **Snow and Ice Policy** — The policy sets the standard for snow clearing for roadways and active transportation facilities to support all-season use. Neighbourhood Renewal considers the level of service required for all-season service when designing for active modes.

10. **BREATHE — Green Network Strategy** — Provides guidance on a network of high-quality, accessible, and connected open spaces in Edmonton.

    a. Identifies Victoria Promenade as an important open space

11. **Corporate Tree Management Policy** — A strategy for sustainably managing and enhancing our diverse urban forest. If any trees are removed by the project, the equivalent value will be replaced with new tree plantings in the neighbourhood.

12. **Indigenous Framework** – The framework outlines opportunities for the City to best support and build strong relationships with Indigenous Peoples in Edmonton. Neighbourhood Renewal can support the framework by implementing ways that public spaces are welcoming and safe for Indigenous Peoples and ensure they can see themselves reflected in those places.
